☎ +959941591844

I am a Frontend Developer with a strong focus on crafting professional and user-friendly interfaces for both mobile applications and web applications. With solid experience in frontend development, I possess a good understanding of application and software development domains. I have worked in both collaborative team environments and as a freelancer, gaining practical experience across various types of projects. I value company culture, positive working environments, and maintain strong interpersonal relationships and professional ethics. When it comes to work, I am dedicated, responsible, and always strive to deliver my best. I have a good grasp of core programming principles and can quickly learn and adapt to new frameworks, libraries, and tech stacks as needed.

Experience

Junior Frontend Developer at Innovix Solutions

March 2022 - Feb 2023

- Solid foundation in core web development technologies
- Strong interest in building responsive and user-friendly interfaces
- Hands-on experience with HTML, CSS, SCSS, SASS, Stylus, PUG templating, JavaScript (ES6+), React Js, Bootstrap and etc.
- Actively learned and implemented guidance and best practices shared by senior developers
- Collaborated with seniors and team members to successfully develop customized websites based on client requirements
- Contributed to delivering high-quality projects on time, meeting client expectations and deadlines
- Regularly reviewed and presented technical progress related to my role to ensure alignment with team standards
- Proactively asked questions and sought feedback from seniors to strengthen my technical knowledge
- Took initiative to continuously improve through self-learning and active participation in team discussions and knowledge sharing

Software Developer (Flutter / Next.js) at Code2Lab

March 2023 - March 2024

- Worked as a Software Developer, contributing to both frontend web development and mobile application development based on project requirements
- Self-learned and applied Flutter to build a customized cross-platform mobile application for a foreign client project
- Developed E-Menu web applications for hotel and restaurant clients using Next.js, focusing on responsive UI and user experience
- Participated in an IoT-based project, integrating hardware such as Raspberry Pi, Camera, and 3D Printer, and delivered the project on time
- Gained hands-on experience with Ruby on Rails, learning and applying the framework to support backend tasks
- Proactively explored and learned various technologies required during the development of client and in-house projects
